Upload this form and the project files to the specified address.

Brief Description

This document is designed to present the individual term project briefly and clearly. Complete only the fields relevant to your project. There is no single required method for the technology, architecture, or file structure; briefly explaining your choices is sufficient.

- Explanations should be concise, clear, and specific to the project.
- Links may be provided for evidence such as a code repository, screenshots, a demo, or test output.
- Use whichever approach suits the project: a single agent, multiple agents, a fixed workflow, tool integration, or a multimodal system.
- Using MCP, a Skill package, specific folder names, or a particular platform is not mandatory.
- Secret keys, passwords, and personal data must not be included in the submission files.

Contents

Brief Description	1
1 Project Summary	2
2 Input, Output, and Usage	2
3 System Design	3
4 Agents, Tools, and Integrations	4
5 Implementation and Execution	5
6 Tests and Results	5
7 Security and Responsible Use	6
8 Conclusion and Future Work	6
9 References and Submission Checklist	7
10 Student Declaration	7

1 Project Summary

Provide a general overview of the project in a few short paragraphs.

The problem the project aims to solve

The purpose of the project and its target users

Brief project summary: How does the system work overall, and what does it produce?

Application domain

**Languages / technologies
used**

Models or services used

Current project status

2 Input, Output, and Usage

Summarize what the system receives, what it produces, and how it is used.

Primary inputs

Primary outputs

Brief usage scenario: Main steps from the user request to the result

A sample input and its corresponding output

3 System Design

Describe the architecture only to the extent that it applies to your project.

Why did you choose this approach? Briefly justify the choice of an agent, workflow, or traditional software

The system's main components and their responsibilities

The main data or task flow between components

Simple architecture diagram area (optional):

4 Agents, Tools, and Integrations

If your project does not use agents or external tools, you may write “not used” in the relevant rows.

Component / agent / tool	Brief responsibility	Information received or produced
-------------------------------------	-----------------------------	---

APIs, data sources, MCP, Skills, models, or other integrations used (if any)

Important decisions, permission boundaries, or operations requiring human approval (if any)

5 Implementation and Execution

Source code URL

Main execution command

Required core dependencies

Important files or folders

Execution environment

Brief installation and usage steps for running the project

A significant technical problem encountered and the solution applied

6 Tests and Results

Describe the basic checks performed to demonstrate that the project works.

Trial / test	Result obtained	Status
1		
2		
3		
4		

Overall result: To what extent did the project achieve its objective?

Known limitations or incomplete aspects

7 Security and Responsible Use

Evaluate only the items relevant to your project.

OK	Check
----	-------

Secret keys and passwords were not included in the source code.

User data was processed only to the extent necessary.

Risky or irreversible operations were restricted.

Sources and third-party content used were identified.

Project-specific security, ethics, privacy, or copyright concerns and the measures taken

8 Conclusion and Future Work

The most important results and learning outcomes obtained from the project

Improvements that could be made with more time

Core course concepts applied in the project

9 References and Submission Checklist

Documents, articles, datasets, models, open-source projects, or other resources used

OK	Submission item
----	-----------------

A completed PDF version of this form is included.

The source code or project files are accessible.

Installation and execution instructions are included.

A test result or sample usage result is included.

No secret keys, passwords, or unauthorized personal data are included.

Demo, video, or supplementary file links work, if provided.

10 Student Declaration

I declare that I prepared this project individually; identified the sources, third-party code, and artificial intelligence assistance I used; and ensured that the submission files contain no secret keys or unauthorized personal data.
